Data and systems

CONNECTED INTELLIGENCE

Embedded Analytics

APIs

People and processes

INTERCONNECT
EVERYTHING

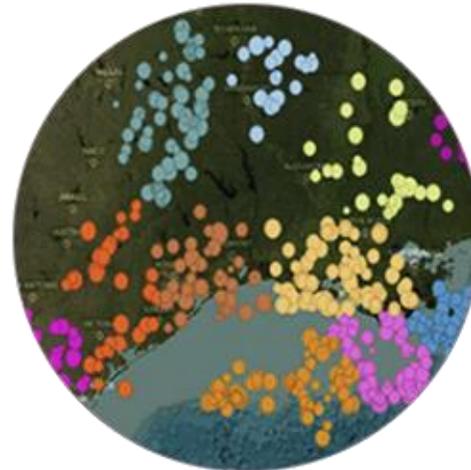

Connected Intelligence connects businesses to their data, wherever it is, and augments their ability to understand, decide, and act on their context.

One stop shop for actionable insights

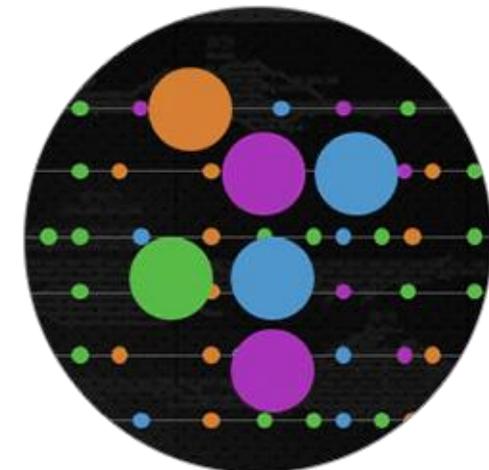

BI & ANALYTICS

AI-driven visualization
to gain insight to
find actionable
insights

DATA SCIENCE

Create analytics that
can predict the future
based on history

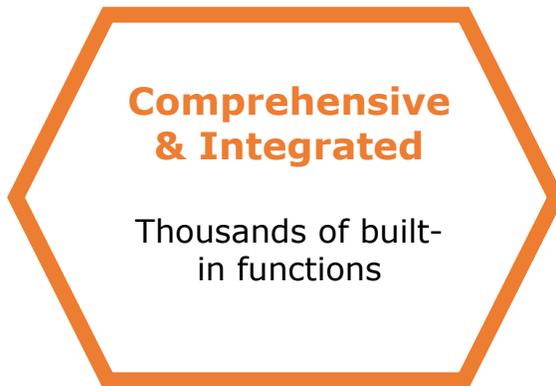

STREAMING ANALYTICS

Provide analytics and
take action on real
time streaming data

TIBCO Statistica™

Comprehensive Analytics Platform

Easy to use predictive analytics

with built-in smarts to enable your workforce

Access and prepare, any data, anywhere

Using databases, cloud, and Apache® Hadoop® sources

Open, flexible, & extensible

R, Python, Scala, in-database or at the edge

Real-time analytics

to process high-volume, streaming data

Collaborate & share

insights and best practices across geographies

Combine rules & analytics

to make prescriptive business decisions

Security & governance

for a well managed approach to analytics.

Analytics are used everywhere for competitive advantage

ENERGY

Optimize exploration, production, and operations while anticipating demands

- Demand forecasting
- Distribution optimization
- Emissions reduction
- Ground composition analysis
- Predictive maintenance
- Reservoir characterization
- and more

FINANCE & INSURANCE

Reduce risks and detect fraud

- Credit scoring
- Customer analytics
- Fraud detection
- Risk management
- Churn analysis
- SOX
- Scorecard
- and more

HEALTHCARE

Improve quality of care and efficiency

- Fraud detection
- Claims management
- Patient safety
- Risk mitigation
- Personalized medicine
- and more

PHARMACEUTICAL

Ensure safety and product quality

- Product traceability
- Stability & shelf life Analysis
- Validated reporting & analytics
- Compliance
- Manufacturing analytics
- and more

MANUFACTURING

Optimize processes, improve quality, and monitor suppliers

- Improve yields
- Reduce scrap, rework, & recalls
- Detect warranty fraud
- Regulatory compliance & safety
- Predict & equipment failures
- and more

Statistica™: 30+ Years of Business Use

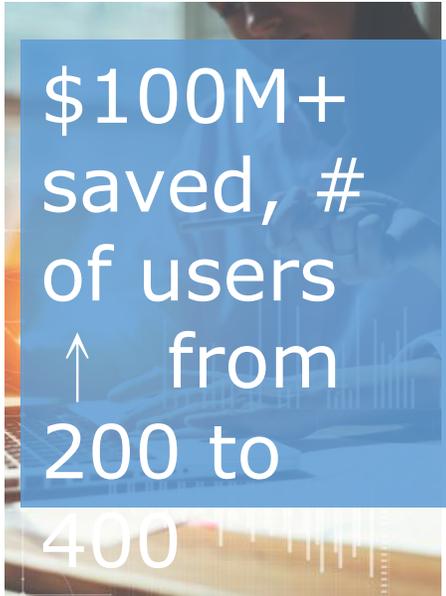

50%
Reduction

top 10 pharma

Scale Analytics with Reusable Data Science

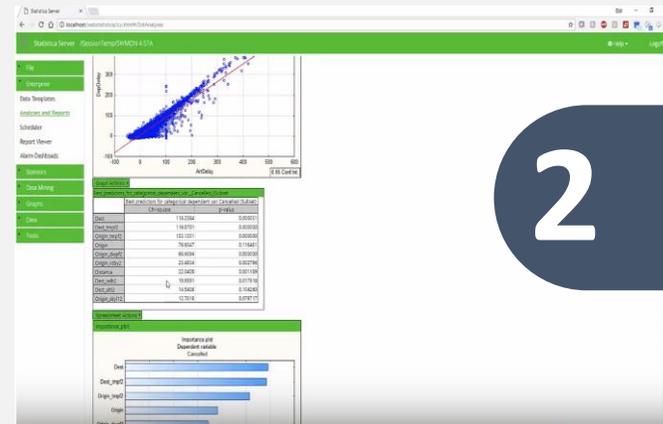

Facilitate reusable data science backed by governance

- Create reusable templates
 - Build complex analytic and data prep workflows once, then share with others
- Automate the mundane
 - Automated data health check, data mining recipes, and simplified deployment
- Collaborate and share
 - Annotate workflows and ensure trust, security, and privacy with model management and governance

1

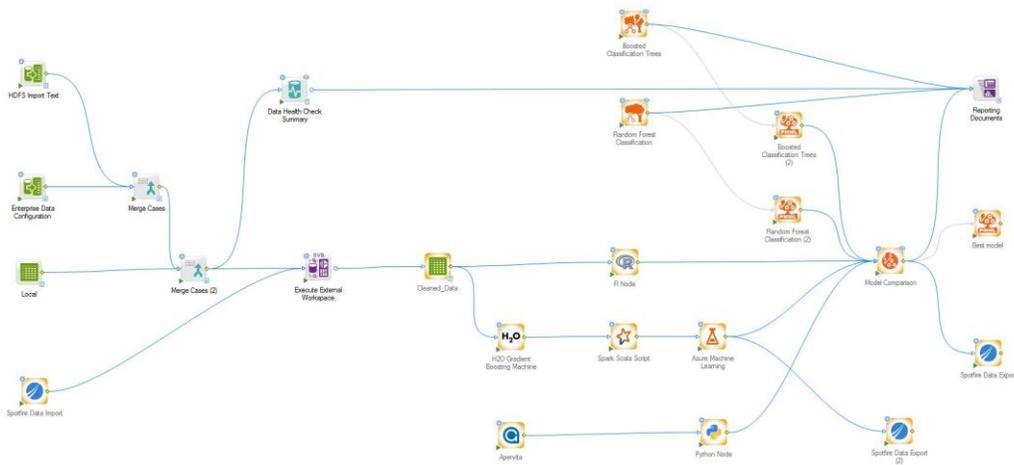

Designer creates reusable template and decides which parameters to expose in a workflow

2

Citizen Data Scientist Selects analysis and items of interest, runs analysis workflow

STATISTICA WORKSPACE

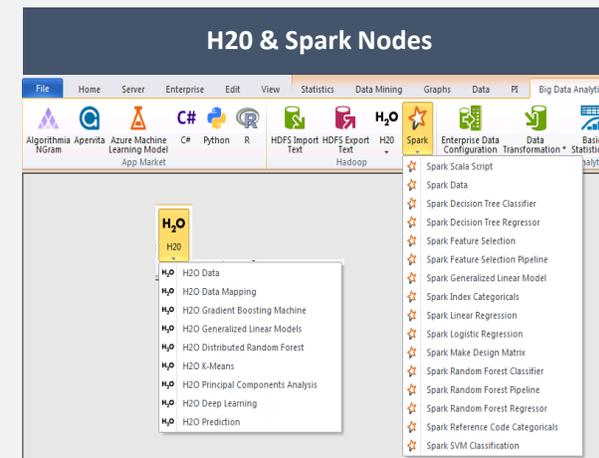

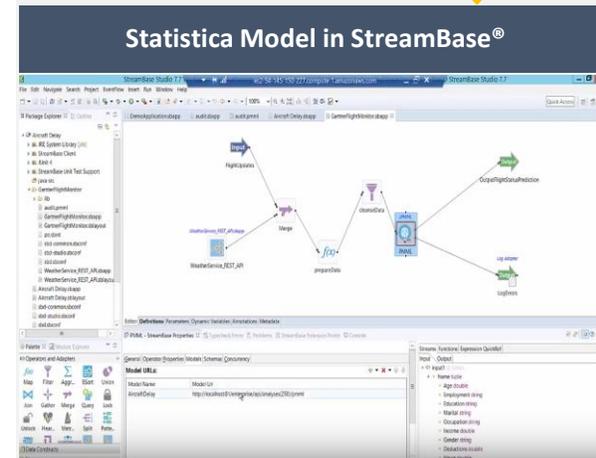

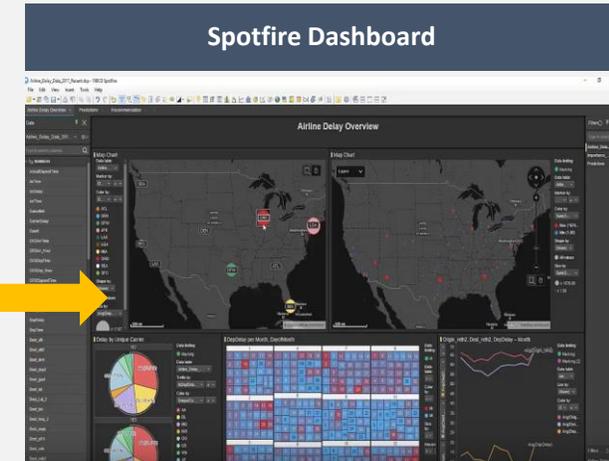

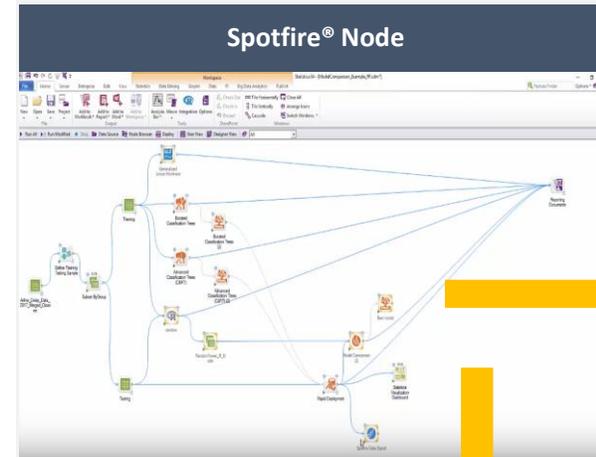

Accelerate Innovation with Data Science

Make innovation easy with smart, flexible, and comprehensive analytics

- Create innovative models
 - Use the latest deep learning, predictive, prescriptive, AI, and analytical technique
- Rapidly prototype new techniques
 - Use one of the thousands of built-in analytics, code in open source, or access algorithm marketplaces
- Capabilities
 - Thousands - of drag and drop nodes
 - Algorithmia – marketplace for algorithms
 - Apervita® – democratizing healthcare analytics
 - Microsoft Azure® ML – cloud based analytics
 - Microsoft® Cognitive Toolkit – deep learning framework
 - Open Source - R, Python, Scala, C#
 - Apache Spark™ MLlib
 - H2O and Sparkling Water
 - Amazon S3™

What's New: Statistica 13.3

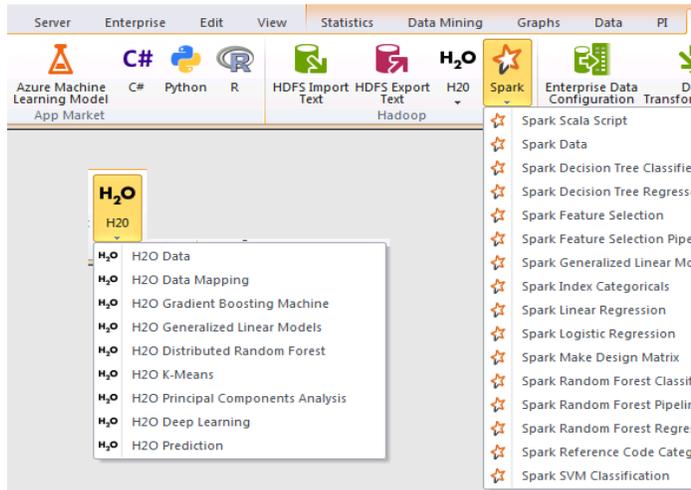

- **Integration with TIBCO**
 - Ability to read/write TIBCO Spotfire® SPDF files
 - TIBCO StreamBase® integration
- **Analytics**
 - H2O Distributed Random Forest, K-Means, Principal Components Analysis, Deep Learning
 - Spark Decision Tree Classifier, Decision Tree Regressor, Feature Selection, Generalized Linear Model, Linear Regression, Logistic Regression, Random Forest, SVM
 - Fit Johnston Distribution by CPM - used to accurately characterize a process
 - Correspondence Analysis - simple and multiple correspondence analysis (MCA) can analyze data with fractional weights
 - Alternating Least Squares - matrix factorization method designed to handle big data
 - Used for recommender systems, text mining, impute missing data
 - Weight of Evidence node enhancements
- **General**
 - PI Asset Framework integration
 - Model Comparison node
 - Improved reporting capability
 - Dynamic filtering capability in Enterprise Manager

Scale Data Science with Statistica

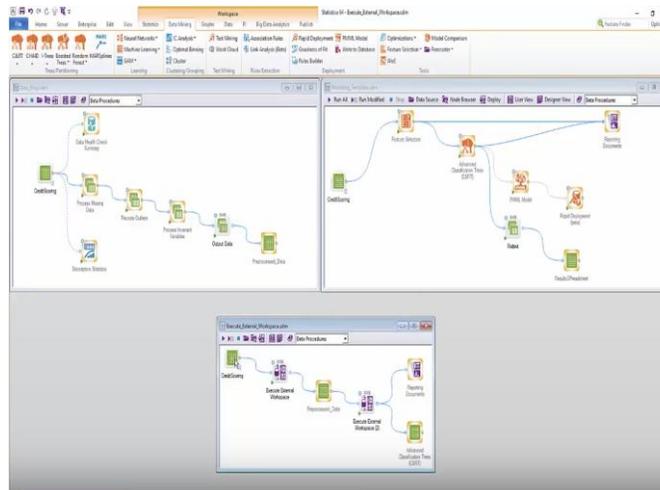

Accelerate innovation with Data Science

Make innovation easy with smart, flexible, and comprehensive analytics

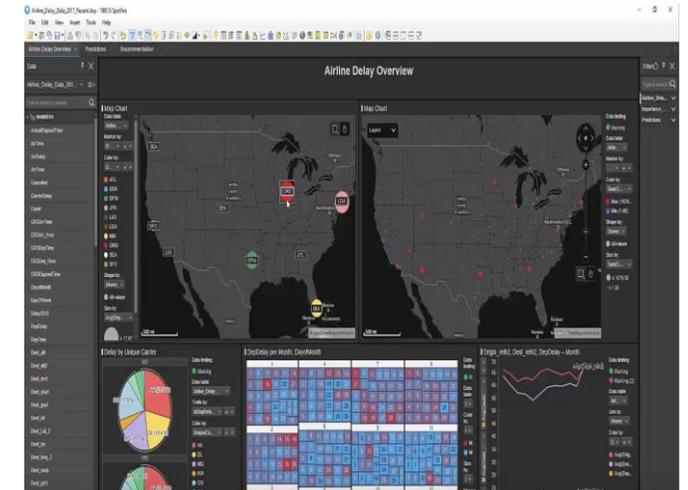

Scale Advanced Analytics Across the Business

Facilitate reusable data science fortified with governance

Infuse Algorithms Everywhere

Deploy deep insights for a competitive advantage.

Thank You!
